Streamworks: Music Streaming App

Team Members: Chris Dove, Oscar Lopez, Tyler Thach, Romel Aleman

Software Requirements Specification

1.1 General Description

The software being developed is a music streaming app. The Application will have basic streaming features for listeners. Artists will be able to host their music on the application for users to listen to. The application will have ads for free users, and the ability to subscribe monthly to listen without ads.

1.2 Product Scope

- Create user account to listen to music
- Log in/out of user accounts
- Users can save songs, create playlists, and share music
- Administrators will have accounts to verify artists and approve added music
- Music will be stored in a cloud database

2. Revision History

Version 1.0 (October 4 2023): Initial document creation.

The Application System Requirements Document serves as the foundation for the development team to design, develop and implement the application with the specified features and functionality. Any future changes or updates to these requirements must be documented and communicated properly.
